

Majesty is a technology oriented, design driven, truly independent ski company. We bring you premium tools for your winter adventures since 2007.

We have decided to call the 2021 collection Re//Defined and this is what it truly is. Skiing Re//Defined.

touring range

Superscout

High performance touring skis.

Our new model excel during the climbs, handle high speed with ease and is confident in difficult snow.

We have equipped our new re-engendered skis with a flat tail, auto-rocker tip, semicap construction, paulownia wood core, triax and biax fiberglass.

Light, fast and responsive, this ski is all about keeping the weight to a minimum for the uphill climb.

Superscout skis offer perfect balance between uphill performance and skiing in highly variable snow.

Touring is about weight conscious approach, all-round performance and high quality skiing in diverse terrain.

Using the whole length of the contact edge enhances grip, control and drive in the turns.

The shape and profile of the camber gives perfect responsiveness, great power transmission and smooth edge-to-edge ride.

Superscout Carbon

High performance carbon touring skis.

Superscout Carbon offers ultra-lightweight progressive performance that makes long ascents feel shorter while it provides unsurpassed control and predictability to help you ski with full confidence.

We have equipped our new re-engendered skis with a flat tail, auto-rocker tip, semicap construction, paulownia wood core, full carbon layup and carbon-aramid fibers.

Light, fast and responsive, this ski is all about keeping the weight to a minimum for the uphill climb.

Superscout Carbon is designed for advanced touring and offers perfect balance between uphill performance and skiing in highly variable snow.

Touring is about weight conscious approach, all-round performance and high quality skiing in diverse terrain.

Using the whole length of the contact edge enhances grip, control and drive in the turns.

The shape and profile of the camber gives perfect responsiveness, great power transmission and smooth edge-to-edge ride.

FLEX. SPRING. RESPONSE.

The Carbon construction is our lightest and most exclusive construction using the lightest biaxial carbon.

Why Biaxial carbon? By customising carbon fibre orientation between 0° , 30° and 45° , we can control, optimise and add flex without losing stiffness or responsiveness.

Carbon skis offer more feel, more responsiveness and more flex than conventional skis.

Superwolf

The ultimate, multi-purpose ski to handle diverse conditions, fresh tracks and steep, technical lines.

Superwolf is the ultimate, multi-purpose ski to handle diverse conditions, fresh tracks and steep, technical lines.

We have equipped our new re-engendered skis with an early rise tail, rocker tip, semi-cap construction, paulownia wood core, triax and biax fiberglass.

It is a high performance ski mountaineering skis that usability has been increased with the longer contact edge and more control.

Construction and radius makes Superwolf stable at high speed and manoeuvrable in tight places.

Touring is about weight conscious approach, all-round performance and high quality skiing in diverse terrain.

Using the whole length of the contact edge enhances grip, control and drive in the turns.

The shape and profile of the camber gives perfect responsiveness, great power transmission and smooth edge-to-edge ride.

Supernova Carbon

Supernova hits all the marks as a stand out performer from shrilling hardpack to floating through powder and with its remarkable edge grip it skis extremely well in all conditions.

We have equipped our new re-engendered skis with a flat tail, rocker tip, semi-cap construction, paulownia wood core, full carbon layup and carbon-aramid fibers.

This allowed us to build ultra-lightweight skis that support dynamic responsiveness and unmatched skiing stability even in the sketchiest weather and terrain conditions.

By reducing the tail length and moving the skier back we have created quicker turning and more versatile skis. The notable length and weight reduction was achieved without compromising any functionality.

Touring is about weight conscious approach, all-round performance and high quality skiing in diverse terrain.

Using the whole length of the contact edge enhances grip, control and drive in the turns.

The shape and profile of the camber gives perfect responsiveness, great power transmission and smooth edge-to-edge ride.

freeride range

Havoc

Everyday freeride skis designed for Zakopane, Røldal or Chamonix.

Havoc's lightweight construction combined with 4x4 design concept delivers incredible manoeuvrability while the unique combination of quadrax fiberglass, full carbon layup, carbon/aramid fibers and durable engineered wood core embraces high performance and just the right amount of 3D flex.

We have built lightweight freeride skis that support dynamic responsiveness and unmatched skiing stability even in the sketchiest weather and terrain conditions.

The new 4R sidecut makes turns easier, giving more confidence, stability and control on all types of terrain. New 4R rocker tip reduces drag, maximise control and top speed.

With Havoc, you can use the edge, keeping it engaged for longer and getting more out of the turn. You can do short sharp turns, long big mountain turns and release when needed.

Havoc is fast and at the same time very adaptive, it is smooth in turns no matter how fast you are going and no matter the conditions.

It's a great technical everyday freeride ski.

Freeride Re//Defined

Adventure skiing not limited by any boundaries - one pair of skis that works in all snow conditions. Dynamic responsiveness and unmatched skiing stability even in the sketchiest weather and terrain. Ultra-lightweight performance and versatility that encourages you to push harder and further.

4x4 design concept

/4-radius sidecut and 4-radius rocker/ We have equipped our new freeride skis with 4x4 design concept. The new 4R sidecut makes turns easier, giving more confidence, stability and control on all types of terrain. 4R sidecut is a result of applying 4 different radiuses to the sidecut of the ski.

New 4R rocker tip reduces drag, maximise control and top speed. 4R rocker is a result of applying 4 different radiuses to the rocker line. You can now experience the future of high performance, technical freeride skis.

FLEX. SPRING. RESPONSE.

Vanguard

Big mountain performance designed for Hokkaido, Alaska or St.Anton

Vanguard's lightweight construction combined with 4x4 design concept, delivers incredible manoeuvrability while the unique combination of triax fiberglass, carbon/ aramid fibers and durable engineered wood core embraces high performance and just the right amount of 3D flex.

Instead of being overly stiff, Vanguard construction gives you flex when landing big jumps, spring when transitioning in turns, control when skiing across chewed-up conditions and an immediate response to your every input.

The new 4R sidecut makes turns easier, giving more confidence, stability and control. Due to 4R rocker at the tips and tails it's an absolute blast for surfing around in powder.

Lively in powder and shock-absorbing in rough terrain or chewed-up conditions, the Vanguard is an absolute must-have for deep powder and big mountain enthusiasts.

Although designed for big mountain performance, Vanguard is a quick turning and versatile big mountain powder skis.

resort range

Adventure

All-mountain skis for exploring the entire mountain.

Adventure is an ultimate all-terrain ski that delivers sharp, precise turns and provides high-end performance at high speeds.

Auto-rockered tip makes it easy to initiate and drive into each turn. Poplar and ash wooden ski core offers liveliness and responsiveness. We have introduced semi-cap construction for increased durability and flex distribution.

Adventure skis feel strong and stable when charging down the pistes.

Majesty resort range is highly versatile and was built with the adventure in mind.

It was created to deliver proper products for resort skiers looking for precise, high quality and elegant skis.

Adventure skis handle most snow conditions, they are quick and intuitive. They also offer perfect grip and snow contact through the entire turn.

The resort range is handcrafted with the highest quality components and is designed to be used without a binding plate, resulting in additional weight savings.

freeski range

Vandal

All-rounders for the park, slope and backcountry.

Vandal gives you the feel of wood core, versatility, soft flex and enhanced carve abilities. They are wide, true twin tips with extra sidecut. Re-designed hybrid construction featuring new camber-rocker line and tip&tails profiles.

While camber supports edge-hold, control and cushions the impact of flat landings, rocker improves the float and allows for an effortless all-terrain ride even in deeper snow. Buttering and pillows shredding have never been easier.

Imagine mountains as a natural snow park.

Unique, hi-performance and durable products for all types of snow conditions and preferences.

The freeski range includes skis for jumps, jibbs, backcountry and all-mountain freestyle. We have chosen one model per category and calibrated it to deliver the most technical and accurate product.

We've been working on the profiles, flexes, widths and the overall technical details to deliver products that will transform the mountains into a natural freeski playground.

Rogue

All-terrain skis.

Rogue are 100mm-underfoot all-terrain skis designed especially for those who are seeking adventures. Hybrid construction enables effortless rides in any snow conditions. While rocker supports better float in powder, camber increases responsiveness, makes landings smoother and edge grip more secure.

A combination of Triax and Biax fiberglass and tip-to-tail engineered wood core gives you great flex and control. Rogue are perfect for floating in powder and riding fast lines on the wildest of slopes.

They are equipped with durable, long lasting sturdy corrund top sheet construction.

Unique, hi-performance and durable products for all types of snow conditions and preferences.

The freeski range includes skis for jumps, jibbs, backcountry and all-mountain freestyle. We have chosen one model per category and calibrated it to deliver the most technical and accurate product.

We've been working on the profiles, flexes, widths and the overall technical details to deliver products that will transform the mountains into a natural freeski playground.

FAST BASE

FLIPTICAL ROCKER

TWO ROCKERS

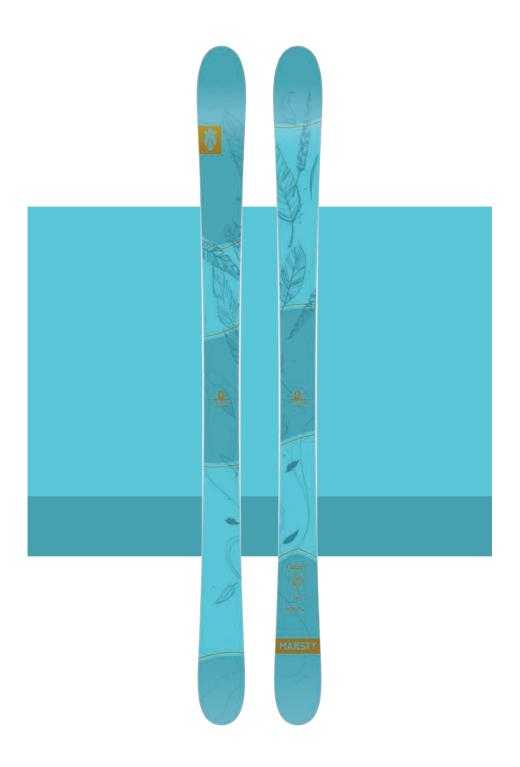

CAMBER

construction: hybrid (rocker/camber/rocker) shape: directional twin tip flex: directional flex ratio: 7 fiberglass: triax+biax rocker type: classic 200mm (162) and elliptical 240mm (170/178/186cm) (tips & tails) core: tip-to-tail woodcore (poplar and ash) base: fast base IS7200

size: 162cm, 170cm, 178cm, 186cm sidecut: 120-100-115mm radius: 15,6m; 18,0m; 20,0m, 23,0m weights: N/D, 1750g, 1900g, 2040g

extras: durable sturdy corrund top sheet

designed for: all-terrain, backcountry

Local Beauty

All-mountain freestyle skis.

Local Beauty have a soft and forgiving directional flex, they are also lightweight and responsive thanks to poplar and ash woodcore. The full camber construction allows for an increased edge-hold, better riding stability and control.

It also supports and absorbs the impacts of flat landings and choppy terrain. Local Beauties are directional freestyle skis that are fun, easy and comfortable to handle.

They are equipped with fast base and upgraded with durable corrund top sheet for better performance.

Unique, hi-performance and durable products for all types of snow conditions and preferences.

FAST BASE

TWIN TIP

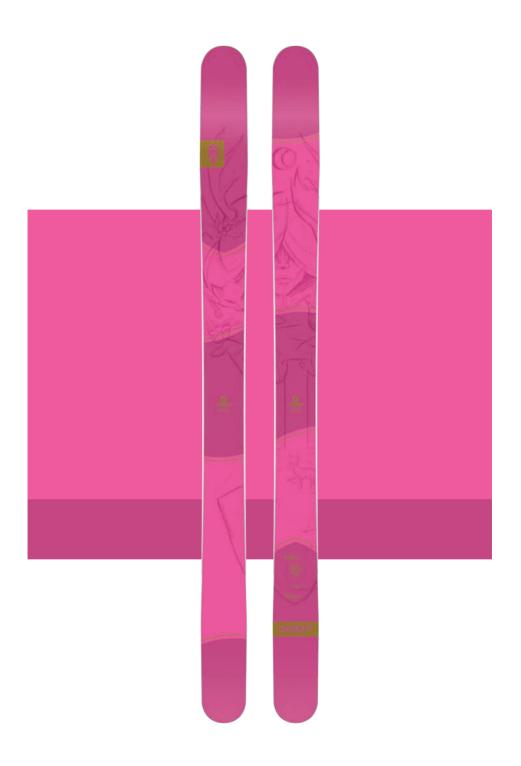

CAMBER

construction: camber shape: directional twin tip flex: directional flex ratio: 4 fiberglass: triax core: tip-to-tail wood core (poplar and ash) base: fast base IS4400

sizes: 150cm, 160cm, 168cm sidecut: 116/82/111mm radius: 12,0m; 14,1m; 15,6m weights: 1100g, 1315g, 1430g

extras: durable sturdy corrund top sheet

designed for: all mountain, freestyle

Velvet

All terrain lady backcountry skis.

Velvet are lightweight backcountry skis designed especially with all our adventure seeking ladies in mind.

Hybrid construction enables effortless rides in any terrain. While rocker supports better float in powder, camber increases responsiveness, makes landings smoother and edge grip more secure.

A combination of Triax and Biax fiberglass and tip to tail light weight engineered wood core gives you great flex and control. Velvet are perfect for floating in deep powder and riding fast lines on the wildest of slopes.

Equipped with durable, long lasting sturdy corrund top sheet construction.

extras: durable sturdy corrund top sheet

designed for: backcountry, freeride

Superior LTD

The top choice for backcountry powder action.

Superior are hybrid technology skis that deliver a perfect combo of float and all the benefits and ease of rocker design and the snappy suspension, and control of the camber.

Lively in powder and shock-absorbing in rough terrain or chewed-up conditions, the Superior is an absolute must-have for backcountry, deep powder and off-piste enthusiasts.

Spin off the cliffs and kickers, blast from stash to stash, slash the wave - Superior skis are so versatile that they have all of this covered. There's a reason for their superiority, after all.

Unique, hi-performance and durable products for all types of snow conditions and preferences.

skipoles

RESORT RANGE

Fixed Adventure skipoles are our traditional poles with a comfortable race grip and traditional tip. They are built for all mountain and piste skiing.

They are made of light, eco-friendly and completely recyclable aluminium alloy 5083.

They come equipped with:

- thick 18mm tube for extra rigidity
- comfortable strap with Majesty logo
- 50mm snow baskets
- stylish matt finishing

FREESKI RANGE

Fixed freeski skipoles are our classic poles with a comfortable race grip and traditional tip. They are built for freestyle and all mountain skiing.

Telescopic freeski skipoles have a comfortable high quality race grip and are great for touring. You can easily switch between freestyle and backcountry. Both models are made of light, durable, eco-friendly and completely recyclable aluminium alloy 7075.

Majesty freeski skipoles are equipped with two sets of snowrings - freeride 85mm and freestyle 50mm.

They come equipped with:

- thick 18mm tube for extra rigidity
- comfortable strap with Majesty logo
- 2 sets of snow rings (freeride 85mm and freestyle 50mm)
- stylish matt finishing
- quick lock system, easy to adjust the pole length
 + emergency twist-lock inside (only telescopic skipoles)

TOURING RANGE

Touring fixed skipoles are our reliable poles with a long touring grip and vidia tip. They are built for touring and freetouring. Touring skipoles offer full range of adjustability, lightweight and different grip options for long tours and steep traverses. Touring 3-stage skipoles are great for ski alpinism and technical tours.

All models are made of light, durable, eco-friendly and completely recyclable aluminium alloy 7075. New foam grip with lower tube provides lightweight and ergonomic comfort. The new seamless strap is made of high resistance polyester. It is durable, light and breathable. Roundhead handle allows to hold the pole by the head, giving a supreme performance on flat areas and safety grip on steep ascents.

Touring 3p Nova Weight: 260g

Touring 3p Wolf

They come equipped with:

- touring foam grip with round head handle
- vidia tip
- new light and very comfortable touring strap with all-over printed logos
- comfortable strap with Majesty logo
- thick 18mm tube for extra rigidity
- 85mm snow baskets
- stylish matt finishing
- quick lock with alloy lever a locking system recommended for ski-alpinism, easy to adjust the pole length + emergency twist lock inside (only touring skipoles)
- thinner lower shaft for a lighter and better balanced skipole, with reduced swing effect and wind resistance (only touring skipoles)

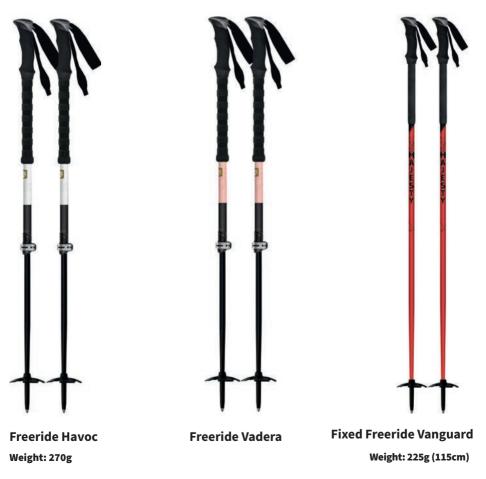

Fixed Touring Scout Weight: 225g (115cm)

Touring Scout Weight: 231g

FREERIDE RANGE

Freeride fixed skipoles are our reliable poles with a long touring grip and vidia tip. They are built for freeride and freetouring. Freeride touring skipoles offer full range of adjustability, lightweight and different grip options for skiing in different terrain. All models are made of light, durable, eco-friendly and completely recyclable aluminium alloy 7075. Long foam grip with lower tube provides lightweight and ergonomic comfort. The new seamless strap is made of high resistance polyester. It is durable, light and breathable. It is so soft that you can hold it along with a grip while skiing down in steep and sketchy terrain. Roundhead handle allows to hold the pole by the head, giving a supreme performance on flat areas and safety grip on steep ascents.

They come equipped with:

- touring foam grip with round head handle
- vidia tip
- new light and very comfortable touring strap with all-over printed logos
- comfortable strap with Majesty logo
- thick 18mm tube for extra rigidity
- 85mm snow baskets
- stylish matt finishing
- quick lock with alloy lever a locking system recommended for ski-alpinism, easy to adjust the pole length + emergency twist lock inside (only touring skipoles)
- thinner lower shaft for a lighter and better balanced skipole, with reduced swing effect and wind resistance (only touring skipoles)

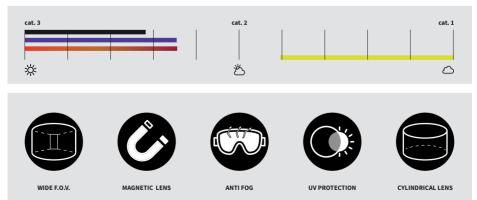

The Force C goggles freature 9 connection points and 18 magnets placed in frame and lens.

They come equipped with:

- ergonomic frame design (pre pressured for extra comfort)
- seamless lens-to-frame seal
- magnetic quick-change lens system
- helmet compatibile frame
- anti-fog and anti-smudge coating
- double cylindrical mirror lens placed in a nano-frame
- full UV protection
- adjustable strap with Majesty logo, effortless self-alignment
- frame ventilated system at the top and bottom of goggles
- microfiber goggle bag for storage and cleaning the lens
- tripple denisity foam
- includes compression moulded storage case
- citrine / moonstone spare lens

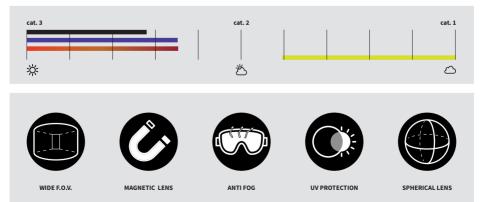

The Force Spherical feature double silicone stripe on the goggle strap to keep your goggles in place.

They come equipped with:

- ergonomic frame design (pre pressured for extra comfort)
- seamless lens-to-frame seal
- magnetic quick-change lens system
- helmet compatibile frame
- anti-fog and anti-smudge coating
- double spherical mirror lens placed in a nano-frame
- full UV protection
- adjustable strap with Majesty logo, effortless self-alignment
- frame ventilated system at the top and bottom of goggles
- microfiber goggle bag for storage and cleaning the lens
- tripple denisity foam
- includes compression moulded storage case
- citrine / moonstone spare lens

The Force Spherical S are a scaled-down, medium-fit version of The Force Spherical goggles and are designed for smaller faces.

They come equipped with:

- ergonomic frame design (pre pressured for extra comfort)
- magnetic quick-change lens system
- helmet compatible frame
- seamless lens-to-frame seal
- anti-fog and anti-smudge coating
- double spherical mirror lens placed in a nano-frame
- full UV protection
- frame ventilated system at the top and bottom of goggles
- triple density foam
- adjustable strap with Majesty logo, effortless self-alignment
- microfiber goggle bag for storage and cleaning the lens
- citrine / moonstone spare lens in a protective
- compression moulded storage case

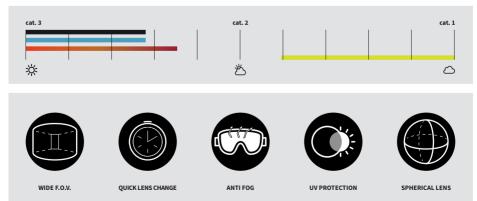

One11 goggles are equipped with an oversized spherical lens inserted in a thin protective frame.

The minimalistic, clean design with very wide field of view guarantees perfect vision and uncompromising style.

They come equipped with:

- ergonomic frame design
- triple layer density foam
- mould injected base frame
- double spherical mirror lens
- seamless goggle-to-frame compatibility
- quick and easy lens change system
- helmet compatible frame
- anti-fog and anti-smudge coating
- 3D channel ventilation concept
- full UV protection
- adjustable strap
- micro-fibre pouch

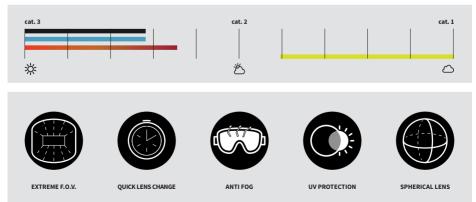

Hypervision is a modern type of oversized goggles with big spherical lens placed outside the frame.

Futuristic yet ergonomic frame design and re-engeneered lens attachments delivers majestic peripheral vision.

They come equipped with:

- extremely wide field of view (horizontal and vertical)
- oversized, ergonomic frame design
- increased peripheral vision
- triple layer density foam
- mould injected base frame
- double spherical mirror lens
- seamless goggle-to-frame compatibility
- quick and easy lens change system
- helmet compatible frame
- anti-fog and anti-smudge coating
- 3D channel ventilation concept
- full UV protection
- adjustable strap
- micro-fibre pouch

VISIBLE LIGHT TRANSMISSION

sunglasses

Pro Tourer

Progressive touring sunglasses that will bring your mountain adventure into another level. Wide cylindrical high-performance photo chromatic lens is great for every touring activity, during the day or night. Lightweight frame, top quality grip and superb performance. Optional mirror spare lenses and premium protection from the sun for approching the highest peaks.

- full UV protection
- laser printed Majesty logo
- black pearl lens + clear lens
- each pair comes with Majesty pouch and cardbox

Vertex

Modern performance sunglasses with removable soft side shields that provide premium protection from the sun. Great for mountain adventures and ski touring. Supreme finishing and high-performance polarised lenses. Non-slip curved temples guarantee comfortable fit. Vertex can be easily transformed into fashionable everyday use frame by taking off the removable soft side shields.

- polarised lens
- full UV protection
- laser printed Majesty logo
- removable soft side shields
- each pair comes with Majesty pouch and cardbox

Apex 2.0

Classic, technical mountaineering sunglasses with faux leather side shields that provide premium protection from the sun. Great for mountain adventures and ski touring. Supreme finishing and high-performance polarised lenses. Non-slip curved temples guarantee comfortable fit. Apex 2.0 can be easily transformed into fashionable every-day use frame by taking off the accessories.

- polarised lens
- full UV protection
- laser printed Majesty logo
- removable faux leather side shields
- each pair comes with Majesty pouch and cardbox

bindings & skins

MAJESTY R12

The next generation of hi-end touring binding.

Majesty R12 is lighter than the most of tech touring bindings (330grams) and is stiffer than most of freeride bindings available on the market.

It offers easy and solid step-in system, incredible torsional stiffness and is constructed with an implementation of several patented systems that significantly increase functionality and performance.

R12 is a reliable, robust, cnc-machined tool that gives the highest skiing performance even in the most extreme conditions.

A new fully-adjustable Freeride Spacer is available as an accessory and supplies precision and power transmission that were previously reserved only for racing alpine bindings.

Majesty R12 is supplied with cooperation with ATK.

Technical Specification:

- Easy Entry System[®]: new geometry of the toe-part elements that makes the stepin easy and confident with any tech boot available on the market.
- Snow Pack Proof System[®]: prevents blocking the toe part with snow and ice, even with several up-hill/downhill transitions.
- U.H.V.[®] System (Up-hill Hardness Variator): allows to change the up-hill locking strength of the toe part; provides a proper locking strength for each user and reduces the pressure on the locking mechanism.
- Cam Release System[®]: exclusive system that provides the most stable downhill performance, extremely precise release and the softest heel step-in.
- Elastic Response System[®]: system applied to the heel part of the binding to support the natural ski flex and reduce the pressure on the ski-boot-binding system.
 ERS[®] supports reliability while skiing in various terrain and minimises the risk of self-release caused by compression or bending the ski. Last but not least, it improves the binding release performance.
- Magneto Heel Flaps[®] provides 5 different walking modes.
- Built-in crampons slots
- 25mm Adjustment Plate integrated in the heel part.
- The release system on the heel part provides 5 to 12 adjustment range, both lateral (Mz) and vertical (My).
- Elastic slide: pad that is integrated in the ski-brake to keep the lateral release value of the binding fixed.
- New rear ski brake with two different positions (locked and active) is operated by a side button.

Hybrid Skins

The new benchmark for climbing skins!

The perfect skin for extensive and demanding tours.

The unique hybrid adhesive consists of two different layers of technical glue which provide both a perfect bond between the glue and the back of the skin as well as perfect tack to the ski base preventing snow from entering between ski and skin.

About Hybrid technology.

Hybrid is the first adhesive for climbing skins that is composed of two layers. The first one holds the skin firmly and securely in place even at low temperatures while it can effortlessly be pulled off and no residues remain on the ski. The second layer joins the adhesive layer and the skin.

The result:

Perfect adhesion to the ski even at low temperature. Effortless removal from the ski.

Low maintenance – the adhesive does not have to be re-glued. When the adhesive is dirty it can be regenerated by simply washing it with ordinary detergent. Use the hybrid cleaning spray to remove tenacious dirt or wax residue. Easy handling: Skins can be folded without any foil or sheet.

Specification:

- plush: 70% mohair blend
- tip attachment: re-designed top fixture with solid wire buckle
- tail attachment: adjustable strap with tail clip

Ski skins come with a branded sack for storing skins, additionally equipped with microfibre cloth.

Use micro fibre cloth to dry and clean ski base before applying skins. Simple and affective tool for your ski touring adventures.

Skins come PRECUT for:

- Ipsilon (trim to size)
- Gamma (Supernova)
- Omicron (Superscout)
- Sigma (Superwolf)
- Omega (Havoc)

Vagabond Jacket

Light, packable and warm. All you need when you're moving light and fast through the backcountry.

Quilted construction, warm and functional hybrid jacket for skiing and touring. Breathable synthetic insulation 150g/m2, stretch panels provide uninhibited movement and help regulate temperature. The 4-way stretch fleece fabric ensures high performance and full range of motion. Upgraded with pre-fit sleeves with thumb loops.

- wind resistant
- water repellent
- durable rip-stop main fabric
- quilted construction that helps maintain core body warmth
- warm and functional hybrid jacket for skiing and touring
- adjustable hood
- breathable synthetic insulation 150g / sqm
- provide uninhibited movement and help regulate temperature
- 4-way stretch fleece fabric ensures high performance and full range of motion
- upgraded with pre-fit sleeves with thumb loops and waterproof zippers
- 2 zipped side pockets + zipped napoleon pocket
- main fabric carry bag included

Light, packable and warm. All you need when you're moving light and fast through the backcountry.

Wind-resistant, quilted construction, warm and functional vest for skiing and touring. Ultralight, packable and minimalistic. Synthetic insulation 150g/m2 provides extra protection that helps maintain your core body temperature. Designed to fit perfectly with both mid layers and shell jackets. Full-length side zipper and velcro closure patch on the shoulder make it easy to put on and take off as weather shifts. Freedom of movement, clean cut, no unnecessary extras, just extra insulation.

- wind resistant
- water repellent
- durable rip-stop main fabric
- ultralight packable and minimalistic
- synthetic insulation 150g /sqm provides extra protection that helps maintain your core body temperature
- designed to fit perfectly with both mid layers and shell jackets
- full length side zipper and velcro closure patch on the shoulder for easy entry
- color-coded zipper with extended puller
- front pocket for storing gloves/sunglasses/headband and skins when necessary
- freedom of movement
- main fabric carry bag included

Vagabond Shorts

Light, packable and warm. All you need when you're moving light and fast through the backcountry.

Wind-resistant, quilted construction, warm and functional shorts for skiing and touring. Ultralight, packable and minimalistic. Synthetic insulation 150g/m2 provides extra protection that helps maintain your core body temperature. Thanks to the side adjustment on the hips, vagabond shorts were designed to fit perfectly with both mid layers and shell pants. Coloured side zippers that run the length of both sides make it easy to put the shorts on and take them off as the weather shifts. Freedom of movement, clean cut, no unnecessary extras, just extra insulation.

- wind resistant
- water repellent
- durable rip-stop main fabric
- ultralight packable and minimalistic
- synthetic insulation 100g /sqm provides extra protection that helps maintain your core body temperature
- side adjustments on the hips designed to fit perfectly with both mid layers and shell pants
- full length side zippers on both legs for easy entry
- color-coded zippers with extended puller make it easy to put them on and take shorts off as weather shifts
- 2 zipped side pockets
- no unnecessary extras
- main fabric carry bag included

Vagabond Gloves

Light, packable and warm. All you need when you're moving light and fast through the backcountry.

Touring gloves made of 4-way stretch fleece fabric, equipped with wind-resistant, quilted construction, warm and functional adjustable cover. Use the cover when it gets colder without changing the glove on the uphill. Synthetic insulation 150g/m2 provides extra warmth. Ultralight, packable and minimalistic. Extended cuff keep glove in place and prevents from cold.

- 4-way stretch fleece fabric
- feature touchscreen-compatible tech fingers and thumbs
- wind resistant and water repellent durable rip-stop fabric (palm cover)
- synthetic insulation 150g /sqm
- extended cuff for comfort and fit
- ultralight packable and minimalistic

Vagabond Hood

Light, packable and warm. All you need when you're moving light and fast through the backcountry.

Wind-resistant, quilted construction, warm and functional adjustable hood for skiing and touring. Ultralight, packable and minimalistic. Synthetic insulation 150g/ m2 provides extra protection that helps maintain your body temperature. Face gaiter made of 4-way stretch fabric integrated in the good. Freedom of movement, clean cut, no unnecessary extras, just extra insulation.

- wind resistant
- water repellent
- durable rip-stop main fabric
- ultralight packable and minimalistic
- synthetic insulation 150g /sqm
- no unnecessary extras

Heatshield is a multifunctional, technical mid layer range that features premium construction, extreme versatility and it was built for comfort.

Heatshield Jacket provides the extra protection, warmth and breathability that you need while being active in colder weather conditions. Jacket is equipped with wind resistant and water repellent durable rip-stop fabric and 150g/sqm synthetic insulation. 3D honeycomb structure fabric ensures high performance, full range of motion and help regulate temperature over high-heat zones. Upgraded with pre-fit sleeves with thumb loops.

- streamlined fit
- wind resistant and water repellent durable rip-stop fabric
- synthetic insulation 150g /sqm
- 3D honeycomb structure fabric
- pre-fit sleeves with thumb loops
- 2 zipped pocket

Heatshield Base layer

Breathable tech fabric

Heatshield is a multifunctional, technical mid layer range that features premium construction, extreme versatility and it was built for comfort.

Heatshield Top is a multifunctional, technical mid layer hooded top that provides the extra protection, warmth, breathability and excellent moisture transmitting properties that you need while being active in colder weather conditions. Large ventilation areas over high-heat zones made of cosy and extra breathable tech fabric help regulate temperature and the 4-way stretch fabric ensures high performance and full range of motion.

Heatshield pants provide the extra protection, warmth, breathability and excellent moisture transmitting properties that you need while being active in colder weather conditions.

- streamlined fit
- 3D honeycomb structure fabric
- thin, breathable tech fabric over high-heat zones
- 4-way stretch fleece fabric ensures high performance and full range of motion
- 3 different types of functional and technical fabric for breathability, warmth and flexibility
- hood provides a neat fit and sits perfectly underneath a helmet
- pre-fit sleeves with thumb loops
- facemask integrated in hooded gaiter made of thin, breathable tech fabric
- easy to access zip pocket
- 3/4 leg for supreme fit and less irritation in ski boots
